

Internet Services at Innsbrook

Innsbrook provides FTTH (fiber to the home) Internet and cable TV services in the Tyrol area. If the residence is not behind the Tyrol gate then these services are not offered. 20mbps and 40 mbps symmetrical speeds are offered. This is typically more than adequate for most users.

Innsbrook provides Wi-Fi based internet services in the condominium complex.

Innsbrook provides Guest Wi-Fi at most facilities. Innsbrook with no password.

Outside of those areas it is up to the home owner to source services.

The options are (list may not be complete).

CenturyLink: <https://www.centurylink.com/internet/dsl-internet-service.html>

Cellular Hotspot: AT&T & T-Mobile can be quite fast, Verizon and Sprint have coverage to a lesser degree. It varies by location. Test with a cell phone to see if it works at your location. Hotspot data plans sometimes are not unlimited so there may be a significant cost if you want to stream lots of data, Netflix, YouTube etc.

Starlink: <https://www.starlink.com/> This can be quite fast but they seem to have long wait times for service delivery. Assuming you can mount a dish that can point in the correct direction.

Hughes Net: <https://internet.hughesnet.com/> This is an alternative, not super fast but available in most places assuming you can mount a dish that can point in the correct direction.

The reality is that several vendors have looked at deploying services but nothing has come of it to date. We welcome proposals from vendors. Innsbrook is unique and that makes it a challenge for vendors. The seasonal nature, the likelihood that many residents would not want service, the challenging terrain (hilly/rocky), the large geographical footprint, the inability to use poles (utilities have to be underground) and the lack of easy access to easements all conspire to make a difficult value proposition for any potential vendor even though they are for the most part what makes Innsbrook, Innsbrook.
